

I feel that XM does a very efficient job with its traffic and weather. I am able to listen when I need to get the information quickly and accurately. It saves me time as well as makes the roads safer because individuals are able to get the information instantly from a dedicated channel. With FM and AM radio if you want instant traffic and weather you have to search through the channels until you find what you need which distracts the driver and can lead to accidents. I urge you to reject NAB's petition 04-160. Thank you and have a nice day.
